

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1.-17. (canceled).

18. (currently amended): The liquid crystal display device as claimed in claim 1, A liquid crystal display device for displaying an image by changing orientation of a liquid crystal layer sealed between two substrates, the device comprising:

a lower substrate having a microstructure which outputs light incident on a side surface of the lower substrate to an upper surface of the lower substrate;

a light source emitting light to the side surface of the lower substrate;

a selective reflection panel provided on the upper surface of the lower substrate to reflect light having a predetermined incident angle or more and transmit the remaining light; and

a reflection panel provided under the lower substrate,

wherein the selective reflection panel is configured to reflect the light having an incident angle that is greater than 42° with respect to a plane perpendicular to the upper surface of the lower substrate.

19. (currently amended): The liquid crystal display device as claimed in claim 1, A liquid crystal display device for displaying an image by changing orientation of a liquid crystal layer sealed between two substrates, the device comprising:

a lower substrate having a microstructure which outputs light incident on a side surface of the lower substrate to an upper surface of the lower substrate;

a light source emitting light to the side surface of the lower substrate;

a selective reflection panel provided on the upper surface of the lower substrate to reflect light having a predetermined incident angle or more and transmit the remaining light; and

a reflection panel provided under the lower substrate,

wherein the selective reflection panel is configured to reflect the light having an incident angle that is greater than 30° with respect to a plane perpendicular to the upper surface of the lower substrate.

20. (currently amended): The liquid crystal display device as claimed in claim 7, A liquid crystal display device for displaying an image by changing orientation of a liquid crystal layer sealed between two substrates, the device comprising:

a lower substrate having a microstructure which outputs light incident on a side surface of the lower substrate to an upper surface of the lower substrate;

a light source emitting light to the side surface of the lower substrate;

a selective reflection panel provided on the upper surface of the lower substrate to reflect light having a predetermined incident angle or more and transmit the remaining light; and

a reflection panel provided under the lower substrate,  
wherein the microstructure is a holographic pattern having a diffraction grating structure,  
wherein the holographic pattern is formed at at least one of a lower surface and the upper  
surface of the lower substrate, and

wherein the holographic pattern is formed at the upper surface of the lower substrate.

21. (canceled).
